PRESS RELEASE

Primate Technologies, Inc. Announces Official Support for Amazon Corretto, version 8

A no-cost alternative to Oracle's implementation of Java

Melbourne, Florida, April 22, 2020: Primate Technologies, Inc. (Primate) is announcing today its official support for Amazon Corretto, version 8, a no-cost alternative to Oracle's implementation of Java. Customers can run all of Primate's products in Corretto's Java runtime environment. Oracle's recent changes to its Java licensing model have made Corretto an intriguing option for many of our customers, and we're pleased to be able to offer it as another way to use Primate's products.

Using Corretto requires no changes to customer installations beyond modifying the location where they look for a Java runtime environment. Primate's software performs the same way and looks the same in Oracle's Java and Amazon Corretto. The only difference we have noticed is that Corretto is slightly more strict about XML encodings, which may require changes in the way customers save documents.

About Primate Technologies, Inc.: Primate is a visualization software company focused on situational and operational awareness realized through a unique blend of advanced illustrations and data processing (techniques). Primate has a record of performance for delivering products that exceed industry and regulatory standards including compliance with security requirements. Incorporated in 2001, Primate specializes in providing solutions within mission critical control rooms.
